Dear Daylight Studio Team:

I am writing to apply for an internship position. Reading about Daylight's work, I was impressed by the quality and breadth of work on projects like the Coeur d'Alene Resort, which additionally empowered the client with content management systems to maintain and update the project into the future. I want to build projects with similar longevity and quality for clients so they can drive value to their business. I want to apply my technical skills, attention to detail, and programming experience in this role.

Over the past five years I have worked across technical roles including chemical analysis, research and development, patent drafting and prosecution, and field engineering. I have worked across large teams comprised of members of varied technical backgrounds in all of my work experience. At the Epicodus program I participated in pair programming during every day of class and enjoy working collaboratively to solve technical issues.

While studying web development in the Ruby/React Epicodus program, I gained extensive experience with technologies not limited to JavaScript, Ruby, Rails, Angular, SQL, npm, and React. In the advanced JavaScript section of the course I enjoyed proposing and building a group project web app which allowed users to participate in and save their progress in browser-based wikipedia races (see more: Wikipedia - Wikipedia Race).

I am a quick learner and have experience working collaboratively across large projects. I am also interested in the community-related work your group has done. In my spare time, I serve as the president of the Portland City Squash League and enjoy building new relationships and fostering community among people sharing common interests and passions.

Thank you for reviewing my application. I hope that my past experience, and skills I have developed at Epicodus, will make me a good fit for an internship with Daylight Studio. I would be thrilled to work and learn alongside your team.

Thanks very much for your time and I hope that this reaches you well.

Sincerely,

Christopher Thomas Cahill
